About Portia Web Solutions

Portia Web Solutions is a website development and full-service Internet solutions provider for small businesses based in Vantaa, Finland. The company was founded in 2010, with the idea of innovative web developments to cover all facts of web technologies and software development. The owner, Anthony-Claret Onwutalobi, had years of experience working on freelance website and graphic design projects prior to incorporating Portia Web Solutions.

Mr. Claret saw a need to create a web design company with a difference. Portia Web Solutions was born with the intention of empowering small business owners to embrace the internet simply and with confidence. Portia Web Solutions was among the small companies in Finland to take advantage of emerging technology and use it to help small business to boost their success online by delivering quality web design that clients could update themselves, at a price they could actually afford. A lot of traditional website developers in Finland were not doing this and getting online was expensive and prohibitive.

At first, Portia Web Solutions, previously known as Codewit Solutions focused on selling website hosting service, and a customer base was built one client at a time. By the end of 2012, Codewit Solutions had a well-established client base and was among the leading website provider in Helsinki and the surrounding communities.

In 2013, Codewit Solutions relocated to Vantaa, Finland and was rebranded as Portia Web Solutions. We hired our first outside sales employee in early January 2013. Today, our team is composed of professional web developers, graphic designers and sales personnel. We partner with a number of graphic designers, content writers, SEO experts, and printing companies to assure quality service and fast turnaround. We focus on high quality custom websites for businesses. Our belief is that your website should not just be an afterthought, but a major asset for your business. We make it our goal to provide you with that kind of standard website.

We design intelligent solutions for businesses that want to have a definitive presence on the internet and offline at very affordable prices. We also develop content publishing system designed for quickly creating highly interactive multi-language Web sites, online communities, media portals, blogs and eCommerce applications and other web applications. Our belief is that websites should be beautiful as well as functional.

For more than 6 years, we have worked with businesses and individuals in Finland and worldwide to create outstanding websites at affordable prices. Every website we develop uses responsive design, to ensure that our work looks great on every device. We take pride in our fast turnaround time and one-on-one communication with our customers. While a lot has changed online over the years, our principles for providing value, affordability and genuinely wanting to help small businesses succeed online has only improved. Portia Web Solutions is available for face-to-face consultations in Helsinki, Espoo, Vantaa, and greater Uusima area.
